# Two separate AI roles

Hidden reference for slide 2

| Workload AI | Policy-writing model |
| --- | --- |
| **Acts through application tools and API identity** | Selects from the control catalog |
| **May receive untrusted input** | Proposes a review bundle |
| **Incident scope varies by case** | Cannot authorize deployment |

**Incident command owns the response decision**

# Data and uncertainty boundaries

Hidden technical reference

| Boundary | What crosses it |
| --- | --- |
| **Runtime events** | Supplied alerts inform review. No Falco ingestion. |
| **Provider request** | Full intent + clause, profile/workload names, or workload/policy/denial reason |
| **Provider response** | Allowed choice + numeric score. Invalid or below 0.6 escalates. |
| **Uncertain dependency** | Retains the proposed allowance and flags human review. |
| **Cluster change** | People apply reviewed changes. Presenter uses fixtures. |

# Pilot quality and workflow economics

Hidden Q&A reference. Separate samples.

| Metric | Jev 1.13 | Opus 5.5 | Base Laya |
|---|---|---|---|
| **33-item screen** | 30/33 | 32/33 | 16/33 |
| **Workflow median** | 1.82 s | 24.18 s | 0.41 s |
| **Estimated API/run** | $0.00019 | $0.03795 | $0 |
| **Policy generated** | Yes | Yes | No |

**Screening labels and three workflow runs are different samples**

# Fallback policy excerpt

Hidden supplied reference. Model inference is not required.

```yaml
apiVersion: policies.kyverno.io/v1
kind: ValidatingPolicy
metadata:
  name: deny-privilege-escalation
spec:
  validationActions: [Deny]
```

**Privilege checks apply to covered new Pod requests**

# Offline fixture outcomes

Hidden reference. Read the evidence limits in the notes.

| Workload | Policy result |
| --- | --- |
| **payments-api** | Passes privilege and egress checks |
| **backup-job** | Would block under the egress-profile policy |
| **report-runner** | Registry violation at Audit, admitted |
| **backup-job with exception** | Egress check skips the matched exception |

**Fixture simulation does not prove runtime containment**

# Copied credential response

Hidden reference. Read the evidence limits in the notes.

| Change | Copied Kubernetes credential | Preserved access |
|---|---|---|
| **Broad binding** | Outside Secret GET/LIST: 200 | Named Secret and ConfigMap: 200 |
| **Pod quarantined** | Outside Secret GET/LIST: 200 | Stand-in HTTP health available |
| **RBAC narrowed** | Outside Secret GET/LIST: 403 | Required named GETs: 200 |
| **Old bound Pod deleted** | Old credential: 401 | Replacement credential: 200 |

**Synthetic resources and stand-in health; app-key rotation untested**

# Training fit and task performance

Hidden reference. Read the evidence limits in the notes.

| Evidence | Result | Interpretation |
|---|---|---|
| **Training fit** | 99.69% accuracy; 99.66% minimum class recall on 1,310 assessments | Fit gate passed |
| **Authored holdout** | 2/15 exact plans; previous Laya also 2/15 | No plan-level gain |
| **Saved Claude run** | 10/15 exact plans | Historical reference; no new API call |
| **Evidence limit** | 15 authored cases; labels not independently reviewed | Not production validation |

**Authored synthetic holdout, without independent label review**

# Operating cost components

Hidden reference. Read the evidence limits in the notes.

| Cost component | Hosted API | Local model |
| --- | --- | --- |
| **Setup and integration** | Keys, billing, network, workspace | Runtime, weights, device and memory |
| **Per-run inference** | Metered token charges | Owned compute and operations |
| **Shared engineering** | Compiler, tests, credentials and observability | Compiler, tests, credentials and observability |
| **Human review** | Uncertainty and unmet intent | Uncertainty and unmet intent |

**Reviewer time unmeasured; local compute is not free**

# Full pilot comparison

Hidden reference. Read the evidence limits in the notes.

| Metric | Jev 1.13 | Opus 5.5 | Base Laya |
|---|---|---|---|
| **33-item screen correct** | 30/33 | 32/33 | 16/33 |
| **Screen decision latency** | 0.17 s HTTP | 2.37 s HTTP | 0.09 s in-process |
| **Selected at score 0.6** | 26/33 | 33/33 | 1/33 |
| **Wrong among selected** | 0/26 | 1/33 | 0/1 |
| **Scenario A median, 3 fixtures** | 1.82 s | 24.18 s | 0.41 s |
| **Estimated API cost/run** | $0.00019 | $0.03795 | $0 API; compute unpriced |

**Different samples and score signals; Laya generated no guardrail**
