Containment review rubric

Team: _____ Case: ____ Constraint: _____

Document the security requirement, operational constraint and acceptance evidence.
Receive a point only when the item is written and your team can defend it. A co-presenter checks a sample. Assessment considers the evidence supporting each plan and its operational constraints.

Round	One point for each written, defended item	Score
Intent and PR review	[ ] Correct enforcement boundary [ ] Measurable availability floor [ ] Missing requirement or independent test	___ / 3
Exception and rollout	[ ] Verified approval authority [ ] Owner and explicit expiry [ ] Narrow workload/control scope	___ / 3
Containment	[ ] Ordered actions and trigger [ ] Critical dependency preserved or conflict explicit [ ] Evidence preserved with recorded decision	___ / 3
Recovery	[ ] Observable exit test [ ] Named rollback/lift authority [ ] Verified safe service and restored controls	___ / 3

Independent proposal review: up to 3 additional points
[ ] Explain the limited scope of the passing privilege tests.
[ ] Name the missing enforcement owner and required acceptance evidence.
[ ] Justify the exact authority granted or withheld, with remaining exposure explicit.

Preserve the original disposition before the reveal. A justified bounded approval, revision, escalation or rejection can earn points. There is no single required vote.
Independent review score: ____ / 3
Total workshop score: ____ / 15

Peer comparison: name one specific, testable assumption that would reverse your containment plan. Compare the evidence requirements rather than selecting a preferred quarantine severity.

Points reward the review process. They are not a security assurance score or proof that a human or model is production-ready.
